

# Extreme photography

CS 178, Spring 2011

---

Marc Levoy  
Computer Science Department  
Stanford University

# Extremes

---

- ◆ high resolution
- high speed
- low speed
- small aperture
- large aperture
- narrow field of view
- wide field of view
- high dynamic range
- low dynamic range

Sinar view camera  
10,000 × 8,000 pixels

# CRAYONS

Different Brilliant Colors

TOYS 'R' US  
68 17 F  
PRICE  
X >> \$2.57

# 111-megapixel wafer-scale sensor

---

- ◆ 95mm × 95mm CCD sensor
- ◆ 10,580 × 10,560 pixels
- ◆ low yield, very expensive

5" (aperture) telescope at  
the U.S. naval observatory,  
Flagstaff, AZ

# Graham Flint's gigapixel.org

---

- ◆ custom camera and lens
- ◆ 18" negative → drum scanner → printer
- ◆ 40,000 pixels × 25,000 pixels

Balboa Park, San Diego

(full-resolution print in Gates Hall, 3<sup>rd</sup> floor, entrance to graphics wing)

San Diego Skyline

xrez.com (also gigapixel resolution)

---

xrez.com (also gigapixel resolution)

---

# Extremes

---

- high resolution
- ◆ high speed
- low speed
- small aperture
- large aperture
- narrow field of view
- wide field of view
- high dynamic range
- low dynamic range

# Harold Edgerton:

“father” of high-speed photography

---

from Stopping Time, 1964

- no shutter
- electronic strobe
- microphone near gun

# Ultra-high speed photography

- atomic explosion
- $1/100,000,000$  second
- camera was 7 miles away
- telescopic lens

# High-speed video with a still camera: the Casio EX-F1

---

- 640 × 480 pixels
- 300 frames per second
- border collie

- 320 × 480 pixels
- 600 frames per second

- 160 × 480 pixels
- 1200 frames per second

# Extremes

---

- high resolution
- high speed
- ◆ low speed
- small aperture
- large aperture
- narrow field of view
- wide field of view
- high dynamic range
- low dynamic range

# Low-light photography

---

Lee Frost, Santorini, Greece

- composite of two exposures
- cityscape was 30 seconds

# Time exposures in astronomy

---

Lee Frost, star trails

(Palomar 200-inch)

- 30-minute exposure
- telescopes can rotate to avoid smearing stars
- What is the unmoving star in the middle?

Jesse Levinson, Andromeda

# Painting with light

---

Lee Frost, railroad yard

- 30-second exposure
- multiple flashes
- Don't stand between the flashed part of the scene and the camera!

Stephen Lesser, CS 178, Spring 2009

David Jacobs and Jongmin Baek, 2011

# Extremes

---

- high resolution
- high speed
- low speed
- ◆ small aperture
- large aperture
- narrow field of view
- wide field of view
- high dynamic range
- low dynamic range

# Small aperture (large depth of field)

---

- the f/64 club

Ansel Adams, Mission San Xavier del Bac, Tucson

# Extremes

---

- high resolution
- high speed
- low speed
- small aperture
- ◆ large aperture
- narrow field of view
- wide field of view
- high dynamic range
- low dynamic range

# Large aperture (shallow depth of field)

---

Lewis Hine, Girl Worker in Cotton Mill, 1908

# Synthetic aperture photography

---

# Example using 45 cameras

[Vaish CVPR 2004]

---

The banner features a dark red background. On the left, there is a large, stylized lens with a red and green glow. To the right, several smaller, blue-tinted lenses are arranged in a grid-like pattern. The word "SynthCam" is written in a large, white, sans-serif font across the center.

# SynthCam

SynthCam is an app for the iPhone 4, 3GS, iPod Touch 4G, and iPad2  
(requires iOS 4.2 or higher)

Price: \$0.99

Current version: 2.0

Available on the iPhone

App Store

single frame

synthetic aperture photograph

Tilt-shift of Stanford quadrangle as seen from Hoover Tower

# Extremes

---

- high resolution
- high speed
- low speed
- small aperture
- large aperture
- ◆ narrow field of view
- wide field of view
- high dynamic range
- low dynamic range

# Narrow field of view: telephoto lens

---

- 300mm lens

Bryan Peterson, Golden Gate Bridge

# Extreme telephoto

---

- Nikon 1540mm Cassegrain reflector

# Other extreme telephoto lenses

---

Canon 1200mm

Nikon 2000mm

Zeiss 1700mm

# Really extreme

---

Hale telescope on  
Mt. Palomar, CA

$$A = 200'' \text{ (16')}$$

$$f = 650'' \text{ (50')}$$

$$N = f/3.3$$

# Extremes

---

- high resolution
- high speed
- low speed
- small aperture
- large aperture
- narrow field of view
- ◆ wide field of view
- high dynamic range
- low dynamic range

# Wide field of view: stitched panoramas

---

# Wide field of view: stitched panoramas

---

Crater Lake, Oregon

- 4 photos, total = 90° field of view
- Canon point-and-shoot camera, handheld
- stitched using Photoshop CS3

# Games with stitched panoramas

---

- 5 shots, with camera aimed slightly downwards and rolled clockwise around its optical axis between shots left to right, producing a curved world effect when stitched using Photoshop with cylindrical projection

# Nikon 6mm fisheye lens

---

- 220° field of view measured diagonally
- 11.4 pounds

# Stanford CityBlock Project (now Google StreetView)

---

- ◆ capture video while driving
- ◆ extract middle column from each frame
- ◆ stack them to create a panorama

# Stanford CityBlock Project

---

# Stanford CityBlock Project

---

# Extremes

---

- high resolution
- high speed
- low speed
- small aperture
- large aperture
- narrow field of view
- wide field of view
- ◆ high dynamic range
- low dynamic range

# High dynamic range (HDR)

---

- ◆ one of photography's key limitations
  - negative film = 250:1 (8 stops)
  - paper prints = 50:1
  - example below = 250,000:1 (18 stops)

(Paul Debevec)

© Marc Levoy

# DIY HDR

---

- 2 shots
- Photoshop CS4

Early morning in Zurich

# Extremes

---

- high resolution
- high speed
- low speed
- small aperture
- large aperture
- narrow field of view
- wide field of view
- high dynamic range
- ◆ low dynamic range

# Atmospheric perspective according to Leonardo

---

Virgin and child with St. Anne

“ the nearest objects will be bounded by evident and sharp boundaries, while those more distant will be... more blurred”

– *On Painting*

# Sinar P3 view camera with 54H digital back

---

- ◆  $2\frac{1}{4} \times 2\frac{1}{4}$  sensor, actively cooled, 14 real bits

single frame  
in dark room  
using iPhone 4

average of  
~30 frames  
using SynthCam

SNR increases as  
 $\sqrt{\text{\# of frames}}$

# Slide credits

(in addition to individually credited images)
