

Ray Tracing

Ray Tracing 1

- Basic algorithm
- Overview of pbrt
- Ray-surface intersection (triangles, ...)

Ray Tracing 2

- Brute force: $|I| \times |O|$
- Acceleration data structures

Ray Tracing Acceleration Techniques

Primitives

pbrt primitive base class

- Shape
- Material and emission (area light)

Primitives

- Basic geometric primitive
- Primitive instance
 - Transformation and pointer to basic primitive
- Aggregate (collection)
 - Treat collections just like basic primitives
 - Incorporate acceleration structures into collections
 - May nest accelerators of different types
 - Types: grid.cpp and kdtree.cpp

CS348B Lecture 3

Pat Hanrahan, Spring 2005

Uniform Grids

Preprocess scene

1. Find bounding box

CS348B Lecture 3

Pat Hanrahan, Spring 2005

Uniform Grids

Preprocess scene

- 1. Find bounding box**
- 2. Determine resolution**

$$n_v = n_x n_y n_z \propto n_o$$

$$\max(n_x, n_y, n_z) = d \sqrt[3]{n_o}$$

CS348B Lecture 3

Pat Hanrahan, Spring 2005

Uniform Grids

Preprocess scene

- 1. Find bounding box**
- 2. Determine resolution**

$$\max(n_x, n_y, n_z) = d \sqrt[3]{n_o}$$

- 2. Place object in cell, if object overlaps cell**

CS348B Lecture 3

Pat Hanrahan, Spring 2005

Uniform Grids

Preprocess scene

1. Find bounding box

2. Determine resolution

$$\max(n_x, n_y, n_z) = d\sqrt[3]{n_o}$$

**3. Place object in cell,
if object overlaps cell**

**4. Check that object
intersects cell**

CS348B Lecture 3

Caveat: Overlap

Optimize for objects that overlap multiple cells

Traverse until $t_{\min}(\text{cell}) > t_{\max}(\text{ray})$

Problem: Redundant intersection tests:

Solution: Mailboxes

- Assign each ray an increasing number
- Primitive intersection cache (mailbox)
 - Store last ray number tested in mailbox
 - Only intersect if ray number is greater

Build Hierarchy Top-Down

Choose splitting plane

- Midpoint
- Median cut
- Surface area heuristic

CS348B Lecture 3

Pat Hanrahan, Spring 2005

Surface Area and Rays

Number of rays in a given direction that hit an object is proportional to its projected area

The total number of rays hitting an object is $4\pi\bar{A}$

Crofton's Theorem:

For a convex body $\bar{A} = \frac{S}{4}$

For example: sphere $S = 4\pi r^2$ $\bar{A} = A = \pi r^2$

CS348B Lecture 3

Pat Hanrahan, Spring 2005

Surface Area and Rays

The probability of a ray hitting a convex shape that is completely inside a convex cell equals

$$\Pr[r \cap S_o | r \cap S_c] = \frac{S_o}{S_c}$$

CS348B Lecture 3

Pat Hanrahan, Spring 2005

Surface Area Heuristic

Intersection time

$$t_i$$

Traversal time

$$t_t$$

$$t_i = 80t_t$$

$$C = t_t + p_a N_a t_i + p_b N_b t_i$$

CS348B Lecture 3

Pat Hanrahan, Spring 2005

Surface Area Heuristic

2n splits

$$p_a = \frac{S_a}{S}$$

$$p_b = \frac{S_b}{S}$$
